

Matej Krizic

Passionate game developer and IT student with strong expertise in Unreal Engine 5 and C++. Experienced in designing and building games, from prototypes to multiplayer systems, and skilled in C#, Python, PHP, and MySQL. Driven by a love for creating engaging gameplay experiences, solving complex problems, and turning innovative ideas into stable, high-quality software.

CONTACT

Date of Birth

03/11/2004

Location

Zagreb, Croatia

Phone:

+385 95 5100 550

Email Address:

TECH SKILLS

- C# (Intermediate)
- C++ (Intermediate)
- MySQL (Basic)
- PHP (Intermediate)
- Unreal Engine 5 (Advanced)
- Python (Intermediate)
- HTML&CSS (Basic)

LANGUAGES

- English (Proficient)
- Lithuanian (Basic)
- German (Basic)

EDUCATION

Technical school for computing and networking

2019 - 2023

Computer Technician

Zagreb University of Applied Sciences

2023 - Now

Bachelor of Information Technology

PROJECTS

Pigeon Invaders

2022 - 2023

Pigeon Invaders is a game I created as part of my school coursework, rebuilding and improving it across three versions using Python (with Pygame), C# (with Windows Forms and Firebase for score storage), and finally C++ (with raylib, an ASP.NET API, and MySQL). Each version enhanced the game's performance and structure, with the C++ version being the most advanced, stable, and compatible. This project showcases my ability to adapt the same game to different programming languages, frameworks, and backend technologies.

Splitstream

2024 - Now

Splitstream is a 4-player co-op heist game inspired by Payday and Hitman, featuring an innovative cause-and-effect timeline system where players split between Present and Future timelines, with past actions directly reshaping the future environment. Built using Unreal Engine 5 with C++ and the Gameplay Ability System (GAS), featuring fully networked multiplayer. Implementing core mechanics including timeline synchronization, ability-based character systems, AI guard behavior, and cross-timeline coordination, demonstrating advanced skills in network programming and complex game systems design.

Eversports

2024 - 2024

Developed a mobile application that helps users find sports partners based on sport type, date, and time. Implemented user registration, post creation, and advanced filtering. Built the client-side using C# with .NET MAUI, and developed the backend API in PHP with a MySQL database (via XAMPP) for user and post management.

WORK EXPERIENCE

Byzantian Interactive

27/05/2025 - 27/07/2025

Worked on an existing large-scale Gameplay Ability System codebase, focusing on diagnosing and fixing bugs in ability logic, C++ implementations, and gameplay interactions. Contributed to maintaining stability and improving reliability within a complex ability framework.

Repeat Games

01/08/2025 - 01/09/2025

Served as the sole programmer responsible for developing a multiplayer MOBA-style game demo from the ground up. Implemented core gameplay systems, abilities, and networking features using Unreal Engine 5, C++, and the Gameplay Ability System (GAS).
